GENERAL 1

SUMMARY LIST OF EMISSIONS TABLES FOR FAST REFERENCE 2

SECTION A: ONTARIO EMISSIONS 3

A.1. Emission Trend

- Table A.1/SO2 : Estimated Emission Trend (1980-1988) of Major SO2 Sources in Ontario. 4
- Table A.1/SO2HY : 1980-1988 Ontario Hydro SO2 Trend. 5
- Table A.1/NOXHY : 1980-1988 Ontario Hydro NOx Trend. 6

A.2. Annual Emissions (5 Pollutants)

- Table A.2/85 : 1985 Ontario Total Emissions by Sector 7
- Table A.2/86 : 1986 Ontario Total Emissions by Sector 8
- Table A.2/87 : 1987 Ontario Total Emissions by Sector 9

A.3. Major Point Sources

- Table A.3/SO2/85 : Ontario Major SO2 Point Sources in 1985 10
- Table A.3/NOX/85 : Ontario Major NOx Point Sources in 1985 11

A.4. Other Emissions

- Table A.4 : 1985 Ammonia & Alkaline Dust Emissions. 12

SECTION B: CANADA EMISSIONS 13

B.1. Emission Trend

- Table B.1/SO2 : 1970-1985 Canada SO2 Emission Trend 14
- Table B.1/NOx : 1970-1985 Canada NOx Emission Trend 15

B.2. Annual Emissions (5 Pollutants)

- Table B.2/85 : 1985 Canada Emissions 16
- Table B.2/85 : 1980 Canada Emissions 17

B.3. Major Point Sources

- Table B.3/SO2/85 : Major SO2 Point Sources in Canada - 1985 18
- Table B.3/SO2/80 : Major SO2 Point Sources in Canada - 1980 19

SECTION C: UNITED STATES EMISSIONS 20

C.1. Emission Trend

- Table C.1/SO2 : 1980-1985 SO2 Emission Trend in the US 21-22
- Table C.1/NOx : 1980-1985 NOx Emission Trend in the US 23-24

C.2. Annual Emissions

- Table C.2/SO2/85 : 1985 SO2 Emissions & Rank 25
- Table C.2/NOX/85 : 1985 NOx Emissions & Rank 26
- Table C.2/VOC/85 : 1985 VOC Emissions & Rank 27
- Table C.2/PART/85: 1985 Particulates Emissions & Rank 28
- Table C.2/CO/85 : 1985 CO Emissions & Rank 29
- Table C.2/SO2/80 : 1980 SO2 Emissions & Rank 30
- Table C.2/NOX/80 : 1980 NOx Emissions & Rank 31
- Table C.2/VOC/80 : 1980 VOC Emissions & Rank 32
- Table C.2/PART/80: 1980 Particulates Emissions & Rank 33
- Table C.2/CO/80 : 1980 CO Emissions & Rank 34

C.3. Major Point Sources

- Table C.3/SO2/85 : Major SO2 Point Sources in the US in 1985 35
- Table C.3/NOX/85 : Major NOx Point Sources in the US in 1985 36

SECTION D: NORTH AMERICA EMISSIONS 37

D.1. Emission Trend

- Table D.1/SO2 : North America SO2 Emission Trend, 70-85 38
- Table D.1/NOX : North America NOx Emission Trend, 70-85 39

D.2. Annual Emission

- Table D.2/SO2/85 : 1985 N.A. SO2 Emissions & Rank 40
- Table D.2/NOX/85 : 1985 N.A. NOx Emissions & Rank 41
- Table D.2/VOC/85 : 1985 N.A. VOC Emissions & Rank 42
- Table D.2/PART/85: 1985 N.A. Part. emissions & Rank 43
- Table D.2/CO/85 : 1985 N.A. CO Emissions & Rank 44

D.3. Major Point Sources

- Table D.3/SO2/85 : Major SO2 Point Sources in N.A. in 1985 45
- Table D.3/SO2/80 : Major SO2 Point Sources in N.A. in 1980 46

GENERAL

The Fast Reference Emission Document (FRED) is a compilation of data designed to provide a quick but comprehensive look at emissions of the main pollutants inventoried by various sources. It is to be noted that the data given in FRED are meant for MOE internal use only and some of the contents are tentative, not final information. FRED consists of four consecutive sections A, B, C and D for Ontario, Canada, the United States and North America, respectively. The data in each section are grouped under the subsections of historical trend, annual emissions, major sources and other emissions.

Due to limited availability and reliability of current emission data, emphasis is placed on SO2 and NOx emissions and on the two base years, 1980 and 1985. Complementary tables for VOC, CO and particulates are added for the base years only. Since emission data will be continually improved and revised by better inventory methodologies and/or more realistic data, a regular schedule of six months is planned to update the FRED tables.

FRED information was derived from different sources. Ontario data were extracted from MOE inventories and reporting systems while internal and tentative emissions provided by EPS were used for other provinces of Canada. Data from NAPAP tapes (Version 5 for 1980) and several EPA official reports (for 1985 and historical trends) were combined to obtain the US emissions. Details of the source references are given at the footnotes of each table.

Raw data for the compilation of Ontario inventories were obtained from Statistics Canada and several other public agencies. This information usually is available after a time lag of one to two years. Emission questionnaires have been sent to potential Ontario industrial sources for 1986 and 1987 and the outcome also depends on the return rate of the industries surveyed. Consequently, the information for the most recent period, 1986 to 1988, is strictly tentative, except for some major sources such as Ontario Hydro stations, Inco, Falconbridge, Algoma Steel, which reported their own official emission estimates.

While every effort was made to eliminate errors and verify the data represented in FRED, it still should be used with care and the references kept in mind. The emission inventory task group will keep FRED regularly updated and expanded with the most recent emission data where applicable.

SUMMARY LIST OF EMISSION TABLES FOR FAST REFERENCE

SECTION	COUNTRY PROVINCE	TABLE NUMBER	DESCRIPTION	CURRENT STATUS Year	Pollutant	SOURCES & REFERENCE	LATEST UPDATE
A	ONTARIO	A.1/SO2	Trend-Major SO2 Sources & Province Totals	80-88	SO2	- MOE	Sept. 89
		A.1/SO2HY	Ontario Hydro SO2 Trend	80-88	SO2	- MOE (from Ont. Hydro Reports)	August 89
		A.1/NOXHY	Ontario Hydro NOx Trend	80-88	NOx	- MOE (from Ont. Hydro Reports)	August 89
		A.2/85	Annual Emissions	1985	5 Major	- MOE	April 89
		A.2/86	by Major Sector	1986	pollutants	- MOE, tentative	Sept. 89
		A.2/87		1987		- MOE, tentative	Sept. 89
		A.3/SO2/85	Major SO2 Sources (10)	1985	SO2	- MOE	April 89
		A.3/NOX/85	Major NOx Sources (10)	1985	NOx	- MOE	April 89
		A.4/ALK/85	Ammonia, Alkaline Dust	1985	NH3, Alkal.	- MOE (EAG report)	August 89
B	CANADA	B.1/SO2	Emission Trend	70-85	SO2	- EPS, MOE	Sept. 89
		B.1/NOx	by Region & Province	70-85	NOx	- EPS, MOE	Sept. 89
		B.2/85	Annual Emission	1985	5 Major	- EPS, MOE	July 89
		B.2/80	by Region & Province	1980	pollutants	- EPS, MOE	Sept. 89
		B.3/SO2/85	Major SO2 Sources (10)	1985	SO2	- EPS, MOE	April 89
		B.3/SO2/80	Major SO2 Sources (10)	1980	SO2	- EPS, MOE	April 89
C	UNITED STATES	C.1/SO2	Emission Trend	80-85	SO2	- NAPAP sources	August 89
		C.1/NOx	by Region & State	80-85	NOx	- NAPAP & other EPA sources	August 89
		C.2/SO2/85	Annual Emission, Rank	1985	SO2	- NAPAP reports	July 89
		C.2/NOX/85	by Region & State	1985	NOx	- NAPAP reports	July 89
		C.2/VOC/85		1985	VOC	- NAPAP reports	July 89
		C.2/PART/85		1985	PART	- NAPAP reports	July 89
		C.2/CO/85		1985	CO	- NAPAP reports	July 89
		C.2/SO2/80	Annual Emission, Rank	1980	SO2	- NAPAP V.5	July 89
		C.2/NOX/80	by Region & State	1980	NOx	- NAPAP V.5	July 89

NOTES ON FRED EMISSIONS AND EPS ESTIMATES FOR ONTARIO

The Fast Reference Emission Document - FRED(*) consists of Ontario data extracted from MOE emission data bases and other areas from Canadian and US inventories. One of the main sources quoted for the other provinces of Canada is EPS, which also contains Ontario information. A comparison between MOE and EPS Ontario estimates is thus necessary. In general, good agreement was observed for the base year 1985. The difference between the two sources for the total provincial emissions usually is about five percent for SO2, NOx and VOC. Higher discrepancies, however, exist with CO and particulates in a number of instances.

The more significant differences in CO and particulate emissions usually come from sectors such as slash burning and open sources. For example, the reason for the difference in slash burning may be the approaches employed by EPS and MOE. EPS method uses the general data of primary forest production and conversion factor of 1 tonne of burned materials per 63,052 cubic metre of production. This is fast and more convenient for the purpose of the national inventory, for which the same procedure for data applicable to all provinces is desirable. MOE approach uses the Ontario Ministry of Natural Resources data, which provides actual size and location of the prescribed fires each year. The burned areas are further integrated in the MOE grid system after being converted to material tonnage by a factor of 22 gs/Ha as proposed in a report by Ontario Research Foundation.

EPS also includes several open sources such as agricultural activities (tilling, pesticides etc.), paved and unpaved roads. These sectors contain great uncertainties and are not included in MOE inventories for the time being. It is difficult to gather accurate statistics for these sources, and the related methodologies as well as emission factors still need to be improved before implemetation to the current MOE grid system can be possible. These subjects will be addressed and resolved in the furture.

(*) V.1 - Final Version for Fall 1989.
